

Question 1403181530

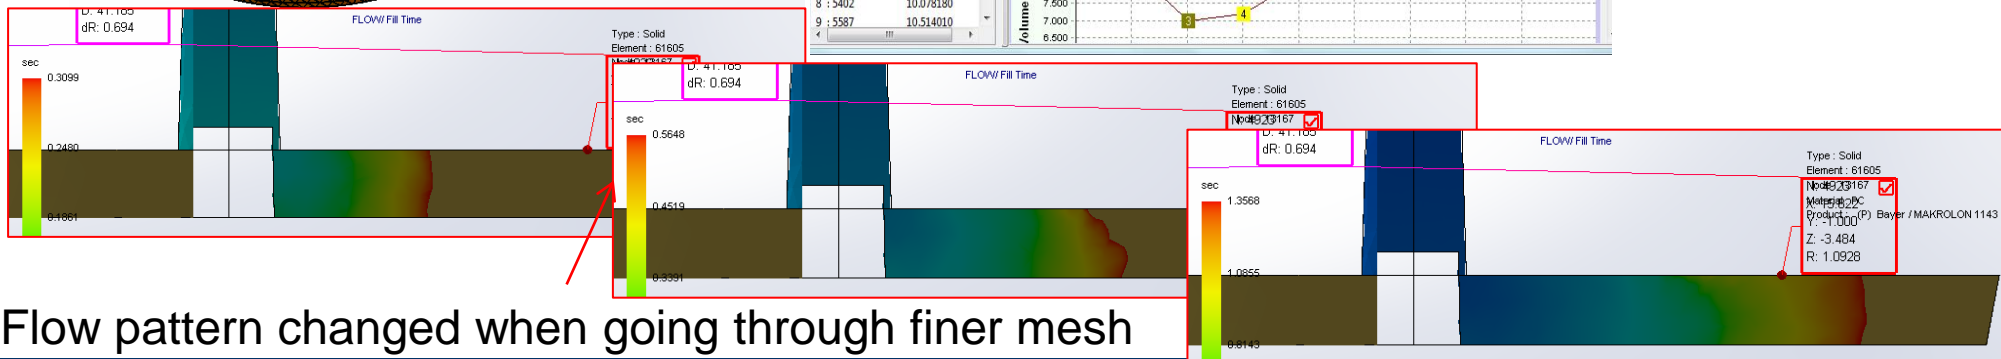

Mould filling with different mesh size.

## • Mould filling

Simulate the filling of a mould/cast diameter 50mm, thickness 3mm with entrance diameter 3mm with a mesh of 1mm and then remesh to start with with 0.1mm to see you obtain the same results. If you obtain the same results continue meshing down to 1nm.

Current problem:  
Deeper sink marks with finer mesh

Flow pattern changed when going through finer mesh
